

The electric industry restructuring law passed in 1997 by the Illinois General Assembly provides many benefits for all customers. As part of this law electric utilities and suppliers are providing an Environmental Disclosure Statement for the twelve months ending every quarter.

The information on this statement shows the breakdown of the different sources that generated electricity for ComEd customers and the average amounts of emissions and nuclear waste produced, between 7/1/05 and 6/30/06.

For comparison purposes, the following shows the Midwest Electric Power Industry averages for sources of electricity generation and emissions for 2001*. 88 percent of ComEd's electricity is generated by nuclear power, 1 percent is generated by natural gas-fired power, and 1 percent is produced by biomass. Both nuclear power and natural gas-fired power have lower emissions of carbon dioxide, nitrogen oxides and sulfur dioxide than coal-fired generation. Because of that, our emission rates are 88% less than the Midwest Electric Power Industry average for carbon dioxide, 93% less for nitrogen oxides, and 97% less for sulfur dioxide.

(Midwest Electric Power Industry Sources—rounded to the nearest whole percent)

Coal-fired power	70%
Hydro power	less than 1%
Natural gas-fired power	4%
Nuclear power	24%
Oil	less than 1%
Renewables	1%
(includes geothermal, biomass, wind, solar, thermal and photovoltaics)	

(Midwest Electric Power Industry Emissions—pounds per 1,000 kilowatt-hours)

Carbon dioxide	1,573.57 lbs.
Nitrogen oxides	5.29 lbs.
Sulfur dioxide	14.03 lbs.

ComEd Air Conditioner Exchange Benefits Low-Income Customers

As part of its CARE (Customers' Affordable Reliable Energy) initiative, ComEd provided about 1200 new, energy-efficient, environment-friendly, ENERGY STAR® approved, room air-

ComEd Senior Project Lead Paul M. Wallace guides a customer through the window air conditioner exchange process at one of five events held this summer in select communities.

conditioners this summer to pre-selected low-income customers in exchange for their old inefficient units.

Communities in Chicago, Joliet and Rockford with a concentration of low-income customers and a prevalence of older housing stock where homeowners are more likely to own and use older window units were selected for the events.

ComEd employees were available at each of the five exchange events to share energy efficiency tips to help participating customers take greater control over their monthly energy bill. For more information on energy efficiency and low-income assistance programs, visit www.ComEdCare.com or call CARE's toll-free hotline (888)806-CARE (2273).

Environmental Disclosure Information

Twelve Months Ending June 2006

ComEd customers line up to exchange old inefficient air conditioners for new ENERGY STAR® units as part of the CARE (Customers' Affordable Reliable Energy) program launched this summer (see back panel for details).

The information contained in the Environmental Disclosure Statement is required by the Electric Service Customer Choice and Rate Relief Law of 1997 and the rules of the Illinois Commerce Commission.

ComEd's Environmental Disclosure Statement

The disclosure of this information is required under Section 16-127 of the Electric Service Customer Choice and Rate Relief Law of 1997 and the rules of the Illinois Commerce Commission, 83 Ill Admn. Code 421.

Sources of Electricity Supplied for the 12 months ending June 30, 2006	Percentage of Total
Biomass power	1%
Coal-fired power	9%
Hydro Power	0%
Natural gas-fired power	1%
Nuclear power	88%
Oil-fired power	0%
Solar power	0%
Wind power	0%
Other resources	0%
Unknown resources purchased from other companies	1%
TOTAL	100%

Sources of Electricity Supplied for the 12 months ending June 30, 2006

AVERAGE AMOUNTS OF EMISSIONS and AMOUNT OF NUCLEAR WASTE per 1000 kilowatt-hours (kWh) for the 12 months ending June 30, 2006	
Carbon dioxide	189.1 lbs.
Nitrogen oxides	0.4 lbs.
Sulfur dioxide	0.4 lbs.
High level nuclear waste	0.006 lbs.
Low level nuclear waste	0.0007 cubic feet
